DESCRIPTORS: *Sodium compounds, *Fluorides,
*Rare earths, Synthesis (Chemistry).

The invention concerns a Process for manufacturing
complex sodium-rare earth fluorides characterized by
the conditions that cryolite and at least one rare earth
oxide are blended together and heated to a temperature
of at least 1290°C. until the complex is formed and the
volatile reaction by-products are practically
evaporated. (Author)

Colistin proved effective at a dosage higher than usual

this new epidemiological situation is not reduced by the
fact that it does not act as rapidly or as certainly as
was the case with neomycin especially against the
classic enteropathogenic coli types. (Author)
